DETAILED ACTION

1. Applicant's March 17, 2009 Amendment has been received. Applicant previously cancelled claims 13-22 and 24 from the September 12, 2008 Amendment.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven Laureanti (Reg. No. 50,274) on Saturday May 9, 2009.

3. The application has been amended as follows: Claims 1-12 and 25-36 have been cancelled. The following claims 37-45 have been added:

37. (New) A computer-implemented method for demand breakout for a supply chain, comprising:

accessing, by a computer, a plurality of orders for at least one product, each product produced using at least one precursor;

accessing, by the computer, a production schedule identifying one or more resources in the supply chain, a quantity of each product and precursor scheduled to be produced by the one or more resources, and a time period associated with production of each product and precursor;

identifying, by the computer, one or more particular units of the product that correspond to each product order;

identifying, by the computer, one or more particular units of one or more precursors that correspond to each product order;

generating, by the computer, a first event for each product order, the first event comprising a request for a specified quantity of a specified item, the first events forming a first layer in a tree;

generating, by the computer, a weighted average for each of the first events, each first event associated with a plurality of attributes and an attribute value corresponding to each attribute, each attribute associated with a weight, the weighted average based on the attribute values and the attribute weights;

generating, by the computer, at least one second event for each of the specified precursors, the second event comprising a reservation of a specified quantity of the specified precursor used to produce the item requested by the first event;

executing, by the computer, the first events in order of decreasing weighted average and to generate at least one additional second event;

executing, by the computer, at least one second event to generate at least one additional first event in a second layer of the tree; and

propagating, by the computer, the first and second events through the layers of the tree to allocate one or more particular units of one or more precursors to the product orders.

38. (New) The method of Claim 37, wherein the second event is associated with a flow that represents at least the specified quantity of the specified precursor arriving at one of the one or more resources.

39. (New) The method of Claim 37, wherein:

a plurality of flows representing at least one precursor are associated with the one or more resources.

40. (New) The method of Claim 39, further comprising:

determining a specified quantity of a specified precursor using the first event;
identifying one or more of the flows that represent the specified precursor; and
generating at least one second event associated with at least one of the identified flows.

41. (New) The method of Claim 40, wherein generating at least one second event comprises:

generating a single second event associated with one flow if that flow represents at least the specified quantity of the specified precursor; and

generating a plurality of second events associated with a plurality of flows if none of the flows represent at least the specified quantity of the specified precursor.

42. (New) The method of Claim 37, wherein at least one of the precursors needed to produce the item requested by the first event is too scarce to produce the specified quantity of the specified item.

43. (New) The method of Claim 42, further comprising:

identifying the precursor that is most scarce using a bill of materials table;

determining a fractional quantity of the specified item that can be produced using the most scarce precursor; and

determining a fractional quantity of each precursor needed to produce the fractional quantity of the specified item.

44. (New) The method of Claim 43, wherein the specified item may be produced according to a plurality of bill of materials tables.

45. (New) The method of Claim 44, further comprising:

identifying the bill of materials table that results in the production of the largest quantity of the specified item.

Allowable Subject Matter

4. Claims 23 and 37-45 are allowed.
